Amendment
Attorney Docket No. E30.2Q-10338-US

In the Claims:

Claims 1-32 (Cancelled).

33. (previously presented): A multiple warning signal light for use with a motorized vehicle, the multiple warning signal light comprising:

- a) a light support having a front side with a first visible exterior surface;
- b) a single row of light emitting diodes arranged about and attached to the first visible exterior surface; and
- c) a controller in electric communication with the light emitting diodes, the controller constructed and arranged to activate the light emitting diodes thereby producing more than two different types of visually distinct warning light signals, the controller further constructed and arranged to produce the more than two different types of visually distinct warning light signals simultaneously, the light emitting diodes receiving power from a power source.

34. (previously presented): The multiple warning signal light of claim 33, said light support further comprising a back side having a second visible exterior surface having a single row of light emitting diodes arranged about and attached to the second visible exterior surface.

35. (previously presented): The multiple warning signal light of claim 34, wherein the controller controls the light emitting diodes on the first visible exterior surface and the second visible exterior surface, for the provision of different warning light signals on the first visible exterior surface and the second visible exterior surface.

36. (previously presented): The multiple warning signal light of claim 33, the controller having a microprocessor.

37. (previously presented): The multiple warning signal light of claim 33, said plurality of light

Attorney Docket No. E30.2Q-10338-US

emitting diodes comprising light emitting diodes of at least two different colors.

38. (previously presented): The multiple warning signal light of claim 33, wherein the warning light signal is in the form of a directional indicator.

39. (previously presented): The multiple warning signal light of claim 33, further comprising a programmable external controller for programming said controller.

40. (previously presented): The multiple warning signal light of claim 33, wherein said motorized vehicle is a utility vehicle.

41. (previously presented): The multiple warning signal light of claim 33, wherein said motorized vehicle is an emergency vehicle.

42. (previously presented): A multiple warning signal light for use with a motorized vehicle, the multiple warning signal light comprising:

- a) a light support having a front side with a first visible exterior surface;
- b) a single row of light emitting diodes arranged about and attached to the first visible exterior surface; and
- c) a controller in electric communication with the light emitting diodes, the controller constructed and arranged to activate the light emitting diodes thereby producing more than two different types of visually distinct warning light signals, the controller further constructed and arranged to produce the more than two different types of visually distinct warning light signals in combination, the light emitting diodes receiving power from a power source.

43. (previously presented): The multiple warning signal light of claim 42, wherein three or more visually distinct warning light signals are generated in any combination.

44. (previously presented): The multiple warning signal light of claim 42, wherein three or more

Amendment
Attorney Docket No. E30.2Q-10338-US

visually distinct warning light signals are generated simultaneously in any combination.

45. (previously presented): The multiple warning signal light of claim 42, wherein three or more visually distinct warning light signals are generated alternatively in any combination.

46. (previously presented): The multiple warning signal light of claim 42, wherein three or more visually distinct warning light signals are generated in any combination of two or more visually distinct warning light signals.

47. (previously presented): The multiple warning signal light of claim 42, wherein three or more visually distinct warning light signals are generated simultaneously in any combination of two or more visually distinct warning light signals.

48. (previously presented): The multiple warning signal light of claim 42, wherein three or more visually distinct warning light signals are generated alternatively in any combination of two or more visually distinct warning light signals.

49. (previously presented): The multiple warning signal light of claim 42, wherein three or more visually distinct warning light signals are generated in any combination of three or more visually distinct warning light signals.

50. (previously presented): The multiple warning signal light of claim 42, wherein three or more visually distinct warning light signals are generated simultaneously in any combination of three or more visually distinct warning light signals.

51. (previously presented): The multiple warning signal light of claim 42, wherein three or more visually distinct warning light signals are generated alternatively in any combination of three or more visually distinct warning light signals.

52. (previously presented): The multiple warning signal light of claim 42, wherein three or more

Attorney Docket No. E30.2Q-10338-US

visually distinct warning light signals are generated in a regular pattern.

53. (previously presented): The multiple warning signal light of claim 42, wherein three or more visually distinct warning light signals are generated in an intermittent pattern.

54. (previously presented): The multiple warning signal light of claim 42, wherein three or more visually distinct warning light signals are generated in an irregular pattern.

55. (previously presented): The multiple warning signal light of claim 42, wherein three or more visually distinct warning light signals are generated in a regular sequence.

56. (previously presented): The multiple warning signal light of claim 42, wherein three or more visually distinct warning light signals are generated in an intermittent sequence.

57. (previously presented): The multiple warning signal light of claim 42, wherein three or more visually distinct warning light signals are generated in an irregular sequence.

58. (previously presented): The multiple warning signal light of claim 42, wherein three or more visually distinct warning light signals are generated at regular intervals.

59. (previously presented): The multiple warning signal light of claim 42, wherein three or more visually distinct warning light signals are generated at intermittent intervals.

60. (previously presented): The multiple warning signal light of claim 42, wherein three or more visually distinct warning light signals are generated at irregular intervals.

61. (previously presented): The multiple warning signal light of claim 42, said light support further comprising a back side with a second visible exterior surface having a single row of light emitting diodes arranged about and attached to the second visible exterior surface.

62. (previously presented): The multiple warning signal light of claim 61, wherein the controller controls the light emitting diodes on the first visible exterior surface and the second visible exterior surface, for the provision of different warning light signals on the first visible exterior surface and the second visible exterior surface.

63. (previously presented): The multiple warning signal light of claim 42, wherein said motorized vehicle is a utility vehicle.

64. (previously presented): The multiple warning signal light of claim 42, wherein said motorized vehicle is an emergency vehicle.
